Birds Nest

This contemporary design acts as a unique and fun environment for young people to socialise. The traditional open style supports safety and security for users of both the shelter and the surrounding space.

Tough acrylic roof panels add a splash of colour providing weather protection, shade and views.

With anti-vandalism detailing this is an ideal solution for any urban or rural space.

Materials and finishes

All timber for the shelter is UK FSC freshly sawn Douglas Fir. The main frame being substantial 150mm x 150 mm sections, inset into galvanised steel box sections. Seats are 400mm deep and backrests angled to provide comfortable seating.

All fixings are hidden and a metal edge detail is added under the seat to protect against vandalism.

The roof has a Douglas Fir frame with tough acrylic panels, available in any RAL colour.

Installation and maintenance

The timber legs slot into 700mm long steel box sections, which are in turn welded onto a galvanised steel triangular base plate. This base plate sits below finished ground level with surfacing running over it. Three concrete pads are required to bolts the frame down. Installation required onto flat level ground.

Dimensions

Floor Width	3680mm
Roof Width	5200mm
Height	2400mm

Roof material options include:

- Steel
- Timber
- Acrylic (any RAL colour)
- Greenroof / Wildflower meadow
