All Urban Ltd

Hoop

An appealing and stylish flexible shelter, ideal for groups to hang out, sit and chat.

The robust Hoop structure sits well alongside skate and urban parks and can be created in a wide choice of colours, or even customised as part of a community youth engagement program.

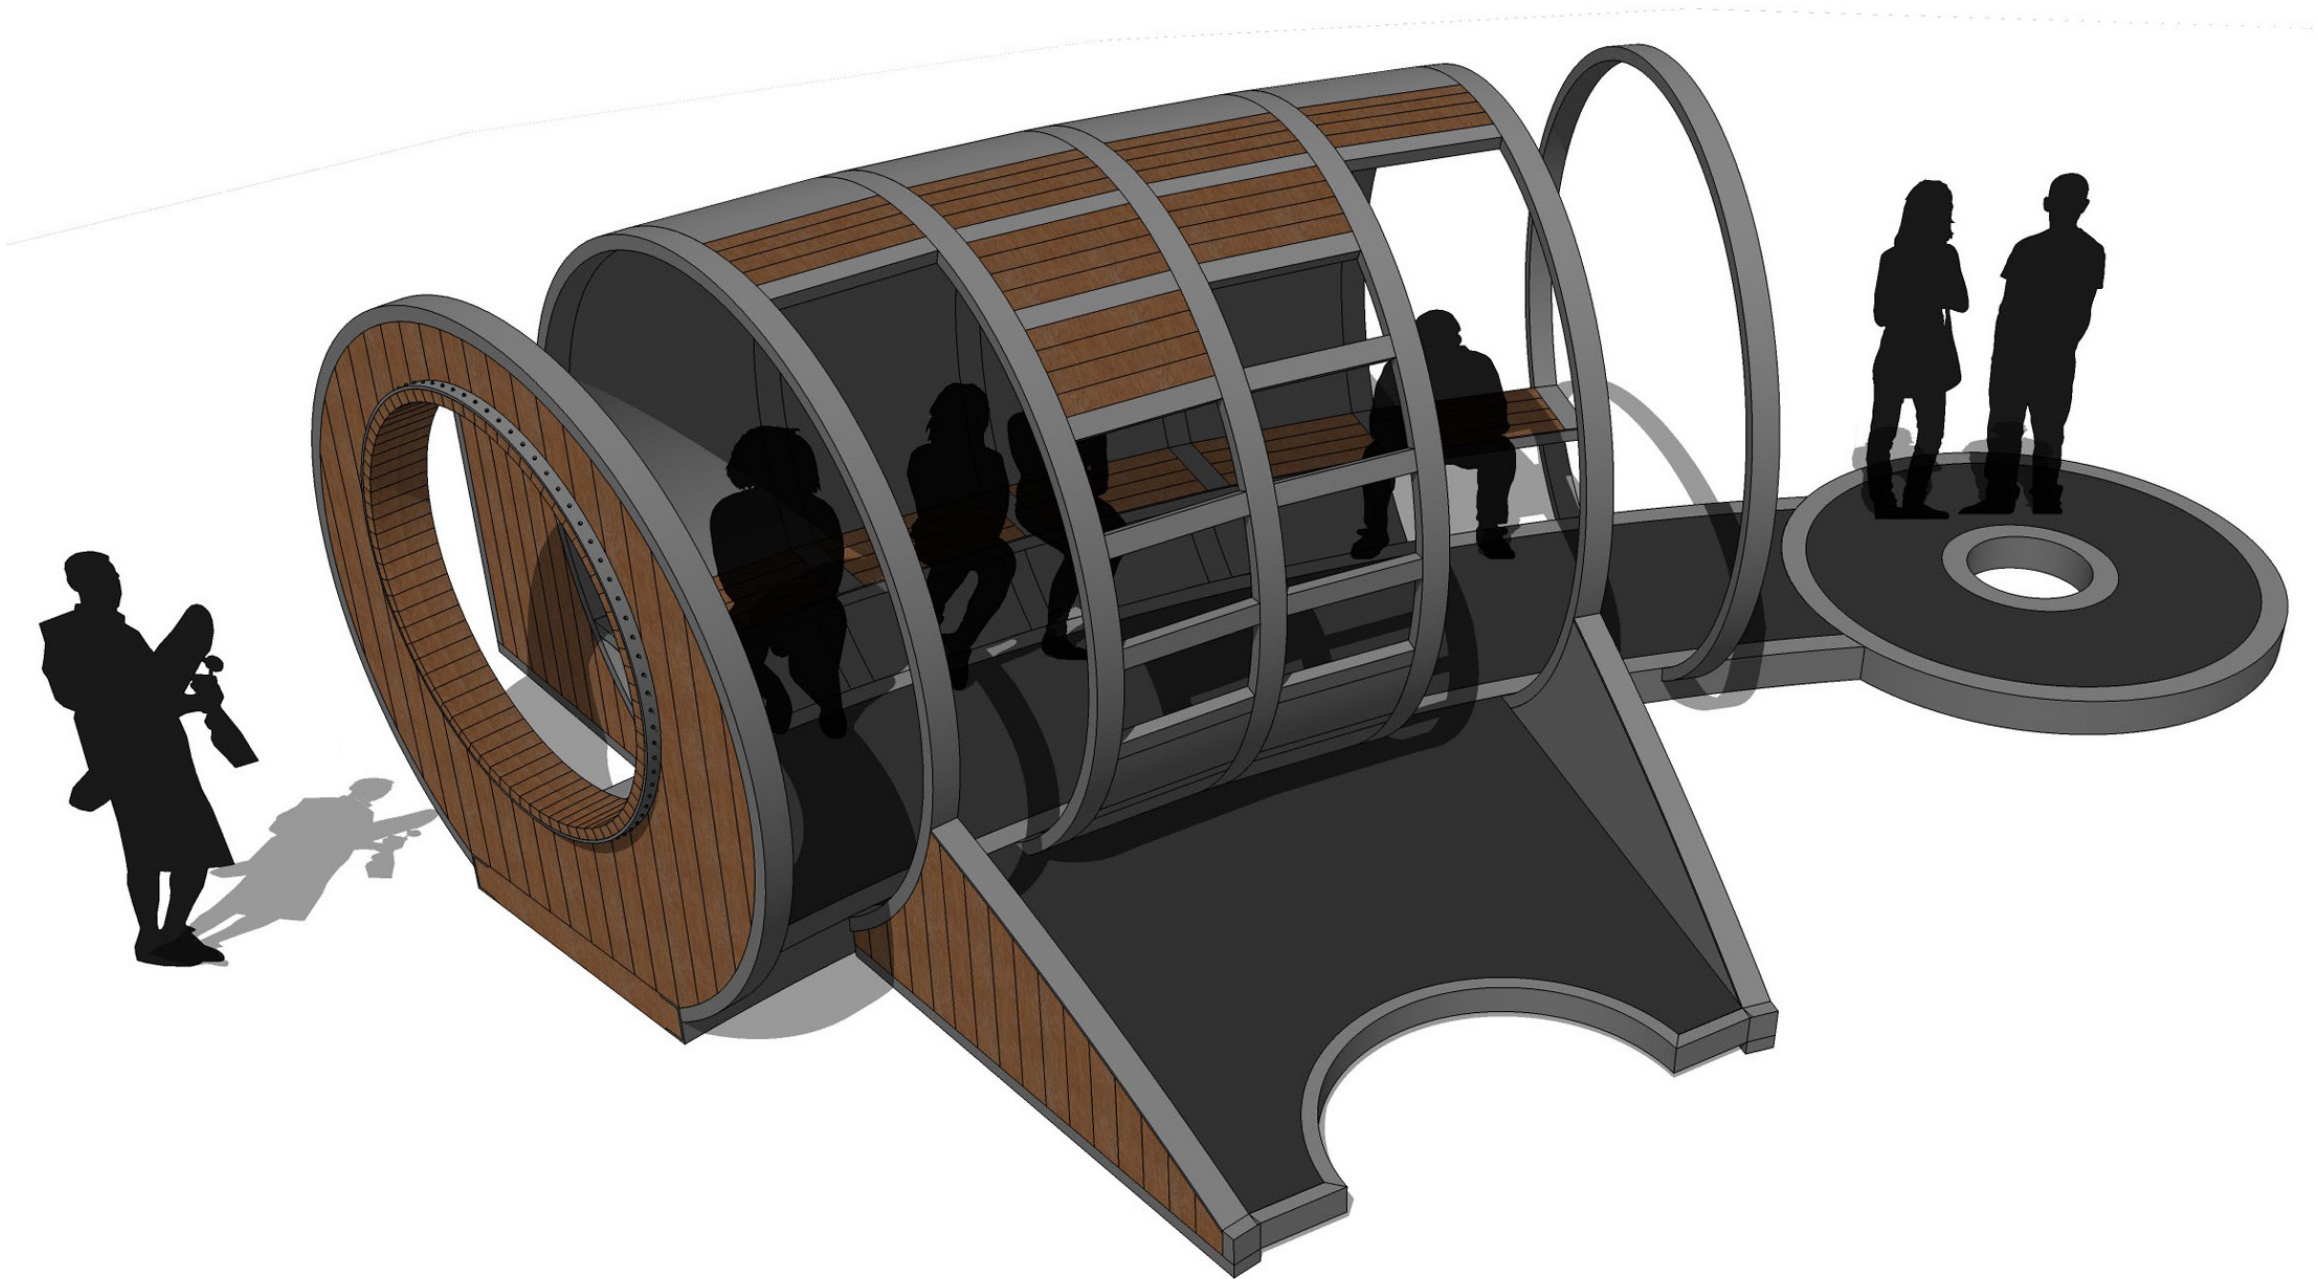

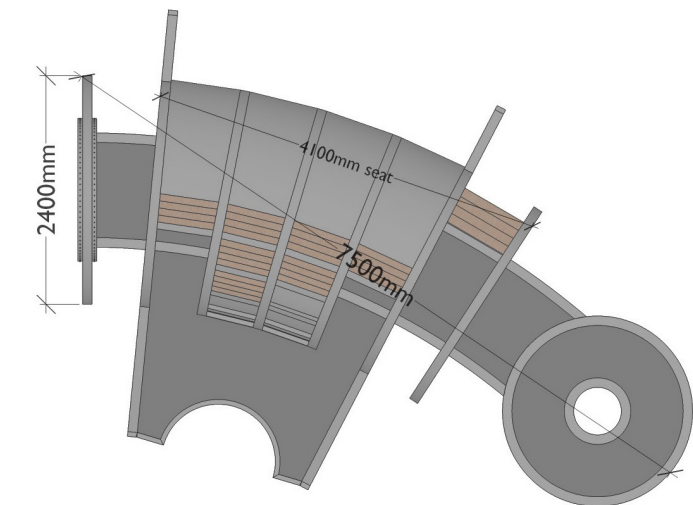

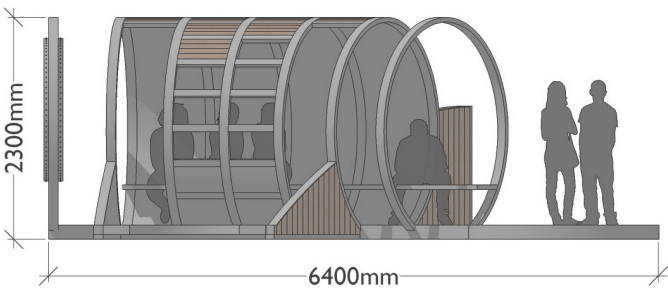

Including noise reduction insulation ensures suitability for residential areas as well as more exposed open spaces.

Materials and finishes

Predominantly a steel structure with additional UK FSC kiln dry Oak cladding and seating detail. The main structure consists of two steel channel sections with seven rings welded to it. The 150mm deep steel channels can either be set in flush with the ground or sit on top and in filled in between.

The steel cladding is double skinned with insulation between to reduce noise.

The steelwork can be pre-painted any RAL colour or customised as part of a community youth engagement program (POA)

Installation and maintenance

The structure is made & welded off site, with all fixings being hidden.

Foundations are not required, just a flat site with base layer. Allowing installation to take just one day.

Lorry and Hi-Ab access within 5m is required.

Dimensions

Width	7500mm	Depth	200mm	Height	2300mm
